Thursday July 31st

9am-noon

All - Sorry this is late, but I've been working on it
all morning. Here

is a revision to the previous memo I sent. It is my current thinking.
I'm going to go get a cup of coffee and it will give you all a chance to look it over. I'll be back in about 15 minutes.

RE: Next

Stormwater Technical

Team Meeting

Thursday July 31st

9am-noon

Good Afternoon --

As promised, here is the revised Table X from EPA's comments discussed at the last Stormwater Technical Team Call. The new sites and/or chemicals that I added are shown in bold. The main changes involve adding the T4 sites and respective chemicals, adding OF-22B for pesticides, and adding PCB's at Schnitzer WR-384.

You will notice that the wording of the title is different from the previous title. LWG suggested this wording so that

this table couldn't
easily be taken out of context. We are still
intending on using the
table as discussed and as proposed by Kristine.

Please note that the rationale for determining
chemicals for further
consideration at T4 sites comes from the Attachment
C-1 of Appendix C of
the Stormwater Loading Methods Report, which is a
memo from Ash Creek
Associates to the Port of Portland regarding basin
selection rationale.
Chemicals for further consideration for basins were
determined in two
ways:

1. Specific land usage that
might be related to
specific
chemicals (i.e., automobile
storage-->metals and
pencil
pitch-->PAHs)
2. Elevated concentrations in
sediment/soil
samples as
noted in that report.

Looking forward to talking to all of you next
Thursday.

Subject: Next Stormwater Technical Team Meeting
Thursday July 31st
9am-noon

Hi Stormwater Technical Team --

During our last meeting on July 3rd, it was agreed that EPA would consider weighting of stormwater concentration results for the purpose of obtaining an aggregate stormwater concentration value for each representative land use. EPA will consider basin weighting by the following methods: basin size, flow, number properties draining to the sampling location, and impervious surface amount.

It was agreed that EPA would issue their recommendation in two weeks (July 17th) and that the Stormwater Technical Team would meet to discuss and agree on the most appropriate weighting method on July 31.

Please confirm you can attend this call from 9am-noon on July 31st.
